April 1, 2011

I work for a system of about 7,000 students, and prior to getting the Edulog Software we were using a 4 map colored system to identify the area each driver was to cover. Edulog gives me the ability to answer a parent in regards to their student bus number, location of the stop, time of pickup and drop off and I can answer them in seconds with much more accuracy.

At the Southeast Conference I was able to learn more of all the capabilities that the Edulog Software has to offer and all the different reports that can be generated from this information. As a school system in 2 different counties, this allows me to generate reports by boundaries and other criteria. The conference gave me the skills I needed to take Edulog to the next level and to feel comfortable in trying to accomplish this on my own. I am more confident in my abilities as we move on into the next phase with Edulog and GPS tracking to go along with Web Query and Fleet Maintenance.

Sincerely,

Helene Rousseau
