Routing Management Features

Checkpoints Module

The 1.67 Athena release introduces a new feature called a Checkpoint. Users can select a location on a path to represent activities a driver is doing other than picking up or dropping off students. This feature gives users the ability to describe and account for locations and time duration within a run. Checkpoints can be maintained within the Checkpoints Module in Data Management in addition to being placed on runs/routes in RPO > Bell Times.

Runs Stops & Trips Card in Runs Module

In the 1.67 release of Athena, the Runs Stops & Trips card within Data Management > Runs now shows student, stop, and passenger information in a unified view at specific stops, featuring an intuitive table structure that allows for easy navigation and nesting of relevant data. This feature eliminates the need for separate cards, optimizing UI space.
